

# D & W SEAMLESS, INC.

## WARRANTY INFORMATION

Office # 262-673-6409

We hereby Warranty the finish of our products, and the Workmanship for leaks or defects from the Installation process.

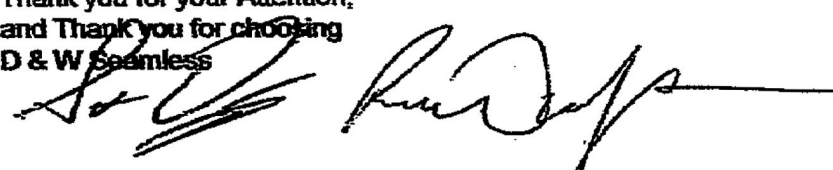

The Homeowner is required to do the following to keep the Warranty in good standing:

1. The Gutters need to be kept cleaned out and free from debris that will slow or stop the proper flow of the rain water (recommended 3 to 4 times per year). Note: New Construction Homes will need the gutters cleaned out within 6 months from move in date due to shingle and miscellaneous construction debris.

Important Information the Homeowner Needs to Know:

1. ½ inch of standing water, in any gutter, is within industry standards for aluminum gutters.
2. On the inside and outside miter corners, a drip may appear in between the aluminum gutter and miter due to condensation from high humidity and/or cool weather.
3. Before calling in a work order for gutters leaking, please test with water or check during a steady rain. If there is a leak, repairs can only be made during warm and dry weather.
4. If D&W is called out for a repair regarding gutter leaks or non-functioning gutters or downspouts and it is found to be due to clogged gutters or downs, or a leak is actually a condensation problem, the homeowner will be charged a \$50.00 service call.
5. Due to Wisconsin winters with freezing and melting, ice and snow may build up and cause dripping or even damage to gutters and downspouts. D&W does not Warranty damage caused by ice or severe weather. To help prevent this, snow should be removed from roofs in areas where there may be a problem of ice build-up.

Thank you for your Attention,  
and Thank you for choosing
